---

**CONGRATULATIONS;** You have just purchased one of the finest appliance and or bathroom fixture finishes in the industry. *AAA Electrostatic Painting* has spent several years developing our refinishing process to a science.

**Kitchen Appliances:**

- 1.) The masking paper on the inside of the refrigerator should be removed by the customer 5 hours after refinishing and then close the doors.
- 2.) All appliances may be moved back and any remaining tape and paper can be removed the following day.
- 3.) The customer will regain full use of all kitchen appliances 24 hours after the new finish is applied.

**Bathroom Fixtures & Countertops:**

- 1.) Any masking tape or paper not removed by the technician should be removed the next day by the customer.
- 2.) DO NOT use your bathroom fixtures for a minimum of 36 hours after your new finish has been applied.
- 3.) The customer is to be very cautious with the new finish for the first week. (complete cure is 6-7 days)
- 4.) DO NOT put any type of bath mat over your new finish. This may cause damage to your new surface which will not be covered under our warranty and you will be charged for us to fix it. There is a anti-skid finish that we can apply to your bathtub or shower if it is too slick for you.
- 5.) Bathroom vanities and kitchen countertops may be used after 36 hours, but do not set anything heavy on top of them for at least 3-4 days.
- 6.) DO NOT leave any soap, shampoo bottles, or any other objects laying on any new finish. In soap dishes that have been refinshed use a plastic soap dish tray to avoid staining or peeling from the chemicals in the soap.
- 7.) DO NOT drop sharp or heavy objects on the finish which may cause it to chip. Call us immediately for a touch up kit or have us come out to fix it for a small service charge. Failure to contact us in a timely manner can result in further damage and will void the guarantee.
- 8.) Faucets must be properly maintained by the owner to protect the new surface. Leaking faucets will erode the new finish, causing it to crack and wear out prematurely, and voiding the guarantee.
- 9.) Be sure that your faucet taps are dry and are not dripping after using the fixture, and to be sure to towel dry the refinshed surface after each use.

**Cleaning Instructions:**

Once our catalyzed finish is fully cured, the finish will be very durable. A damp cloth or sponge often times is a sufficient means of cleaning. If some form of cleaning agent is necessary please use a mild soap or cleaner. DOW Foaming Bubbles, The Works, and Soft Scrub are a few cleaners that we recommend using. Please DO NOT use any abrasive cleaners or any scratch pads! Use of such materials will lead to dulling of your new finish. In general, any cleaner approved for use on acrylic surfaces is okay to use.

Thank you again for choosing *AAA Electrostatic Painting* for your refinishing needs. If for any reason you are not totally satisfied with our product or service please contact us.
